

# Administrator Operations & User Guide

Complete Operating Instructions for Management, Booking Scheduling, Cleaner Staff Dispatch, Financial Reconciliation & CRA Compliance

---

## 1. System Overview & Core Capabilities

The Bright Trust Janitorial platform is a comprehensive field-service management and financial auditing system. It empowers administrators to manage online and phone bookings, control cleaner staff assignments, track job statuses, issue CRA-compliant invoices, and monitor site analytics.

| Module              | Primary Function                                                | Key URL / Location   |
|---------------------|-----------------------------------------------------------------|----------------------|
| Owner Dashboard     | Active leads table, status filters, search & booking actions    | /dashboard/          |
| Cleaning Calendar   | Interactive calendar visualization of active scheduled jobs     | /dashboard/ (Tab 2)  |
| Analytics & Traffic | Monthly revenue breakdown, HST collected, and traffic metrics   | /dashboard/ (Tab 3)  |
| Cleaner Staff       | Manage cleaner accounts, 6-digit PIN resets & availability      | /dashboard/cleaners/ |
| Pricing Settings    | Base fees, sqft multipliers, HST tax rate & Square link         | /dashboard/settings/ |
| CRA Audit Portal    | Immutable financial audit logs and Excel-compatible CSV exports | /dashboard/audit/    |
| Cleaner Portal      | Mobile-optimized job view & photo upload for cleaner staff      | /cleaner/login/      |

## 2. Booking Management & Scheduling Workflow

The system handles two main sources of bookings: public online requests submitted by clients at /book/ and direct phone/manual bookings created by administrators via the + Add New Booking button.

### Booking Status Lifecycle:

- **New Request (NEW):** Initial quote request submitted online by a prospective customer.
- **Contacted (CONTACTED):** Staff have reached out to discuss property specifics or customized pricing.
- **Scheduled (SCHEDULED):** Job is officially booked, calendar slot is locked, 25% deposit email is dispatched, and assigned cleaner is notified.

- **Job Done (COMPLETED):** Cleaner has completed the service and uploaded 'After' photos. The finalized invoice snapshot is locked.
- **Cancelled (CANCELLED):** Booking is cancelled and calendar slot is released.

**Important Rule — Automated Deposit Emails:** Whenever a booking transitions to SCHEDULED status, the platform automatically triggers a dynamic Square Developer API request to generate a 25% downpayment link and dispatches a confirmation email to the customer.

### 3. Cleaner Staff Management Subsystem

The platform includes an enterprise multi-cleaner management subsystem located under the **Cleaners** tab (/dashboard/cleaners/). Admins can manage staff profiles, set availability statuses, and assign jobs.

#### Key Security & Operational Features:

- **2-Factor Phone + 6-Digit PIN Authentication:** Cleaners log into /cleaner/login/ using their unique phone number and a 6 to 10 digit numeric PIN.
- **Secure Hashed PIN Storage:** PINs are never stored in plain text; they are encrypted using Django's make\_password hash algorithm.
- **Daily Availability Statuses:** Each cleaner has a daily status (**Available, On Leave, Out Sick**). Only active & available cleaners appear in job assignment dropdowns.
- **Per-Cleaner Schedule Conflict Lock:** The system prevents assigning a cleaner to two overlapping scheduled jobs.
- **30-Day Mobile Persistent Sessions:** Cleaners log in once on their personal phones and stay signed in for 30 days.
- **Automated Job Assignment Emails:** Assigning a job automatically dispatches a notification email to the cleaner's email address.
- **Mobile Privacy Shield:** Cleaners see customer address and cleaning instructions, but financial totals, HST calculations, and payment details are strictly hidden.

### 4. Financial Auditing, Invoicing & CRA Compliance

To satisfy Canadian Revenue Agency (CRA) tax compliance and financial reconciliation rules, the platform enforces strict invoice numbering and immutability constraints:

- **Sequential Invoice Numbering:** Completed jobs automatically receive a row-locked sequential invoice number formatted as BTJ-YYYY-XXXXXX (e.g. BTJ-2026-000001).
- **Immutable Financial Snapshots:** Once an invoice is generated, financial fields (subtotal, HST, total price, tax rate used) are locked from further editing.
- **Financial Audit Logs:** Every status change, price override, payment update, and cleaner assignment is recorded in FinancialAuditLog.

- **Excel CSV Exporter:** Admins can download a full, UTF-8 BOM formatted financial audit export from </dashboard/audit/export/>.

## 5. Administrator Troubleshooting & FAQs

| Question / Issue                               | Resolution Step                                                                                                                                                    |
|------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How do I reset a cleaner's PIN?                | Go to <b>Cleaners</b> tab -> Click <b>Edit Profile / PIN</b> next to the cleaner -> Type the new 6-digit PIN in the Reset PIN field -> Click <b>Save Changes</b> . |
| What if a cleaner calls in sick?               | Go to <b>Cleaners</b> tab -> Edit cleaner -> Set Availability Status to <b>Out Sick</b> -> Save. The system will prevent assigning them to new jobs.               |
| Why am I getting a slot conflict error?        | Check if another active booking exists at the same time or if the assigned cleaner already has a job scheduled during that 4-hour window.                          |
| How do I change business pricing or tax rates? | Go to <b>Pricing Settings</b> (/dashboard/settings/) -> Update Base Fee, Sqft Multiplier, or Tax Rate (e.g. 0.1300 for 13% Ontario HST) -> Save.                   |
